# Corporate IT Password & Security Standards

## 1. Corporate IT Security Standards

As a multi-tenant SaaS provider, CORE Technologies enforces strict security policies to protect corporate systems and tenant data from unauthorized access or malicious activities.

## 2. Password Strength Requirements

All employee accounts must be secured with passwords that meet the following complexity rules:

- Minimum length of 14 characters
- Contains at least one uppercase letter (A-Z)
- Contains at least one lowercase letter (a-z)
- Contains at least one numeric digit (0-9)
- Contains at least one special character (e.g., !, @, #, $, %)

Passwords must be updated every 90 days, and reuse of the last five passwords is prohibited.

## 3. Multi-Factor Authentication (MFA)

MFA is mandatory for accessing the corporate VPN, administrative panels, and production databases. Authentication prompts should be completed using corporate-registered authenticator apps.
